

Sustainable Energy Systems

Sustainable Energy Systems offer a number of key consultancy services to ensure that your renewable energy project is completed as quickly and efficiently as possible. We offer a turn key service managing your project from start to finish, taking the pressure off you and maximising the chances of success!

Site Survey

After an initial desktop survey and a conversation with us have confirmed the potential viability of your project, the next step is a technical site survey. Whatever technology you wish to install, this is a critical part of making sure that you get the right system for your property, your needs and your budget.

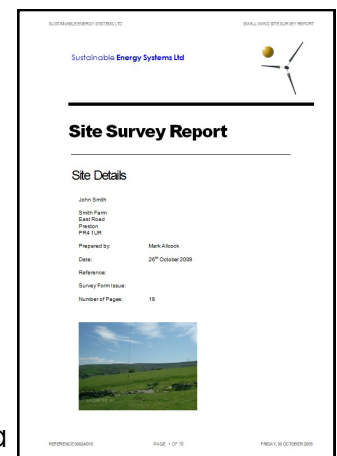

A member of our technical team will visit your site, discuss the logistics of installing your chosen system and take detailed measurements. Shortly afterwards you'll receive a comprehensive report and a full quotation.

The Site Survey Process Includes:

- > An energy generation estimate taking into account geographic and site specific factors
- > An assessment of the potential impact of the proposed system on neighbours
- > Obtaining energy usage of the property and the impact that the system will have on that
- > Any issues concerned with connecting the system to the electricity grid
- > Any site specific access issues that might impact the installation or maintenance of the system
- > Obtaining sufficiently detailed photographs and measurements to allow a subsequent planning application to be made
- > An optional 'Energy Estimate Plus' service that uses sophisticated software to produce site-specific wind flow models, allowing more accurate energy production estimates.

The site survey report provides you with a comprehensive picture of the proposed system for your site and is used as an information tool throughout the process of installation. So, while it does require the investment of some time and money, it's a vital part of ensuring the success of the project. Your system could be generating renewable energy for in excess of 20 years, so it's important to get it right from the start.
